

ABSTRACT

1 A packing crate made of paper, an adhesive and thread sewn into the paper and a method for
2 making the same. The crate protects the goods outside and inside from damage, has a good
3 appearance, and can withstand sudden temperature and humidity changes. The crate folds up
4 Kraft paper and/or the corrugated paper, etc. and stitches the paper together. One or two lines of
5 stitches, 50 to 80 stitches per meter, the thread having a thickness of 300D/3 to 500D/3, the thread
6 being a thick synthetic fiber. The stitches are made before the adhesive fully dries.
